

FEELING FOGGY ON YOUR CLOUD NETWORK CONNECTION?

5 SIGNS Your Cloud Connection Is Mission-Critical Ready

Is your cloud connection “mission-critical” ready? It all depends on the types of applications you’re running in the cloud, and how important they are to the productivity of your people and the success of your business. Public, private or hybrid, there’s a lot to know, but where do you start?

DO YOUR MISSION-CRITICAL APPS REQUIRE CONSISTENT NETWORK PERFORMANCE?

Are you moving large volumes of information in and out of the cloud? The public Internet moves packets on a best-efforts basis. For your company to excel in the cloud, you need deterministic network performance, guaranteed throughput, availability, latency, and a real security plan.

HOW SECURE IS YOUR NETWORK CONNECTION?

With the right policies, encryption and firewalls, you can help safeguard your data over the Internet. But when you’re running mission-critical business apps, the stakes are high. A private network, isolated from the public Internet, provides a secure environment for you to develop and deploy new apps with less risk.

DOES YOUR NETWORK SERVICE OFFER OPTIMAL EFFICIENCY?

There comes a point where you are transferring so much information to the cloud that a private network service is more cost-effective than the public Internet. But that doesn’t mean you need to give up flexibility. If your workloads are variable, you need a network service that scales dynamically and only charges you for what you use. Don’t leave money on the table.

DOES YOUR NETWORK PROVIDE GLOBAL CONNECTIVITY?

The cloud is everywhere and so is your business. Is your network? A network provider with a private, local-to-global network can help your business connect to the resources it needs to run no matter where it is in the world.

ARE YOU WORKING WITH A PROVEN NETWORK SERVICE PROVIDER?

It’s virtually impossible to migrate to the cloud without a solid network strategy. You need a network service provider who knows how to navigate the complexities of the cloud and help your company blaze a fast, secure and reliable path through the haze.

Experience all the benefits of the cloud and the security of a private network ecosystem.
